

VALIDATING ENTERPRISE SYSTEMS

A PRACTICAL
GUIDE

David Stokes

Validating Enterprise Systems: A Practical Guide

Table of Contents

Foreword

1 Introduction

- The Need for Guidance on Compliant Enterprise Systems
- What is an 'Enterprise System'
- The Need to Validate Enterprise Systems
- The Enterprise System Implementation Phenomenon
- Background and Content
- Chapter by Chapter
- Background Reading

2 The Challenge of Enterprise Systems

- Breaking Down Silos
- Extending the Traditional Footprint
 - The Move Towards Business Process Management
 - The Need to Increase Software License Revenues
- Regulatory Compliance Challenges
- The Need to Validate Enterprise Systems

3 Acquisition and Procurement

- Stakeholder Involvement
- Cost of Compliant Ownership
- Package Assessment
- System integrator Selection
- Supplier Assessments
- Contractual Commitments
- Program Structure
- IT Infrastructure Qualification and Control

4 Developing and Documenting User (Business) Requirements

- What Are User Requirements For?
- Regulatory Expectations for User Requirements
- User Requirements Capture
- Use of Business Process Models
- Use of Process Narratives
- Leveraging Use Cases
- Including Business Rules
- Identifying Key Regulatory Requirements
- Non-Functional Requirements

Recommended Approach to User Requirement Specifications
What about Functional Requirements?
Requirements Identification, Verification and Allocation

5 Validation Planning

Assumptions
The Implementation Program
Off-the-Shelf, System Specific Validation Models
System Integrators Experience
Validation Training
Rapid Applications Development
Configurable versus Custom Software
System, not Software Development Lifecycle
Roles and Responsibilities
Risk Management

6 Governance Procedures

Establishing Procedures
Scope
Roles and Responsibilities
Program Team Training
Document Management
Configuration Management
Change Control
 Change Control During the Implementation Phases
 Operational Change Control
Incident and Defect Management
Program Risks and Issues
Regulatory and Business Risk Management
Requirements Management
Other program SOPs

7 Data Migration

What Data Should We Migrate?
Metadata and Audit Trails
Risk Based Data Verification and Validation
Manual Verification
Automatic Verification
Validated Data Migration Routines
Data Migration Steps and Phases

8 Prototyping and Conference Room Pilots

The System Integrators' View of Conference Room Pilots
The Regulated Company View of Conference Room Pilots
Successfully Positioning the Conference Room Pilot
 Interactive Conference Room Pilots
 Verification Conference Room Pilots
One CRP or Two?
Inputs to a Conference Room Pilot
Outputs from a Conference Room Pilot
Conference Room Pilots in a Validation Context

9 Test Strategies

Testing and Other Forms of Verification
To Test or Not To Test
What Tests To Conduct
 Installation, Operational and Performance Qualification
 Risk Assessment and Testing
 Workflow
 Reports and Business Intelligence
 Interfaces
 Data Conversions
 Custom Extensions (including standard COTS software calling Extensions
 Standard Functional COTS Software
 Other Testing
Test Planning, Management and Reporting

10 Managing Configuration Settings

Configuration Settings
Determining the Correct Configuration Settings
Documenting Configuration Settings
Verification of Configuration Settings
Change Control and Configuration Management
Configuration Settings Transport
Verification of Configuration Settings between Instances

11 Electronic Records and Signatures

Scope and Application
 Definition
 Documentation
Technical Compliance
Procedural, Security and User Issues

12 Customizations

What is a 'Customization'
Waterfall Development or Prototyping?
Design Specifications
Design Verification
Software Development and Verification
Change Control and Configuration Management
Appropriate Testing
Program Integration

13 Infrastructure Qualification

Large, Complex Architectures
Instances
Environments
The Impact of Virtualization
Qualifying Environments
Specifying and Installing Components
Middleware and SOA
Open Source Software
The Desktop (or Laptop)
Speciality Field Devices
Common Items of IT Infrastructure

14 Detailed Risk Management

Leverage Industry Good Practice
Risk Management Scope and Process
Risk Management Scope
Risk Management Process
Functional Risk Management
Scaling the Risk Assessment and Risk Management Activities
Initial Functional Risk Assessment
Risk Severity and Requirements
Requirements Allocation, Risk Likelihood and Probability of Detection
Functional Risk Mitigation
Technical Risk Management
Managing Other Risks
Is It Worth It?

15 SOPs and User Training

Change Management and Regulatory Roles
User Roles and the Need for Effective Communications
Revising and Creating SOPs
Training Users
Verifying Successful Change

16 Testing Enterprise Systems

- Nature and Scope of Testing
- Pressure of Time
- Training, Tools and Templates
- Roles and Responsibilities
- Test Documentation
- The Role of Operational Qualification
 - Unit Testing
 - Integration Testing
 - Functional Testing
 - User Acceptance Testing
- The Use of Computer Based Test Tools

17 Validating Enterprise Applications 'In the Cloud'

- Hosting and Managed Services versus 'The Cloud'
- On-Premise versus Off-Premise Deployment Models
- Infrastructure, Platform and Software as a Service (IaaS, PaaS and SaaS)
- Software as a Service Issues
- Platform as Service Issues

18 Go Live!

- Going Live and the Validation Report
 - The Validation Report
 - Are We Ready?
 - Proceeding at Risk
- Go Live!
- Gone Live

19 Post Go Live

- Additional Use Cases
- Enhanced Monitoring
- Initial Periodic Review
- Post Implementation Review
- Audit / Inspection Readiness Review

20 Retrospective Validation

- Assessment of the Existing System
 - Supplier Assessment
 - System Risk Assessment
 - Assess Regulatory Requirements for Validation

System Assessment
Gap Analysis
Cost / Benefits Analysis
Retrospective Validation Planning
Validation and Reporting

21 Maintaining the Validated State

Competency Centers
Outsourcing
New Requirements
Upgrades and Patches
Maintenance and Support Processes
 Intrusion Detection
 Vulnerability Management
 Anti-Virus Shield Updates
 Security Management
 Public Key Infrastructure
 Server Management
 Client Management
 Network Management
 Change Management
 Configuration Management
 Help (Service) Desk Management
 Incident and Problem Management
 Backup, Restore and Archiving
 Disaster Recovery
 Performance Monitoring
 Supplier Management
 Periodic Review
Decommissioning

22 Conclusions

Implementation and Validation Overview
Conclusions

Appendix A Definitions

Appendix B References and Bibliography

Appendix C Acknowledgements
