

CONTAMINATION CONTROL IN HEALTHCARE PRODUCT MANUFACTURING

Volume 1

Russell E. Madsen and Jeanne Moldenhauer
Editors

www.pda.org/bookstore

CONTENTS

I	INTRODUCTION	I
	<i>Russell E. Madsen and Jeanne Moldenhauer</i>	
	Types of Contamination	2
	Regulatory Expectations	3
	Contamination Control in the Real World	4
	Conclusion	5
	References	5
	About the Authors	6
2	THE CONTAMINATION CONTROL PLAN IN FACILITY VALIDATION	7
	<i>Scott Sutton</i>	
	Introduction	
	Components of a Strong Contamination Control Plan	9
	Phases of manufacturing operation	13
	Commissioning and initial start-up	13
	Ongoing operations	14
	Shutdown and recommission	14
	Start-up after unscheduled shutdown	14
	Validated methods	15

iv	<i>Contamination Control in Healthcare Product Manufacturing</i>	
	Understand your facility's microflora	17
	Control incoming bioburden	19
	Appropriate gowning	20
	Training	20
	Controlled environments	21
	Validated sanitization and sporicidal procedures	21
	Well-defined and understood manufacturing processes	23
	Cleaning validation expectations	24
	Minimization of batch residual cross-over contamination	25
	Minimization of cleaning material residual contamination	25
	Danger Signs in Contamination Control	25
	References	26
	About the Author	30
3	FACILITY DESIGN AND CONTROL: MATERIALS AND DESIGN	31
	<i>Gary Devloo</i>	
	Contamination Sources	31
	Contamination Control	33
	Material Location	36
	Level of Control	38
	Material Selection	41
	Role of Regulation in Material Selection	45
	Accessibility of System	45
	Cleanroom Material Testing	46
	Summary	48
	References	49
	About the Author	50
4	FACILITY DESIGN AND CONTROL: HVAC	51
	<i>John Pinto</i>	
	Introduction	51
	User requirements and facility parameters for aseptic processing — "It's all about the product"	52
	HVAC System Design	53
	HEPA Filters	57
	Construction and installation	57
	Efficiency and leak testing	58
	HVAC Control and Automated Environmental Monitoring Systems	60

Aseptic Manufacturing Facility Pressurization Concepts	61
HVAC Verification	63
HVAC Operation and Maintenance	66
References	66
About the Author	67
5 FACILITY DESIGN AND CONTROL: PERSONNEL	69
<i>Anne Marie Dixon</i>	
Sources of Contamination	70
Methods of Control	73
Garments	73
Gowning procedure	75
Sample gowning procedure	76
Training	78
References	79
About the Author	80
6 FACILITY DESIGN AND CONTROL: CLEANING AND SANITIZATION	81
<i>Anne Marie Dixon</i>	
Clean Factory	81
Barrier Zone 1 — The product	82
Barrier Zone 2 — The cleanroom	82
Barrier Zone 3 — The personnel entrance	82
Barrier Zone 4 — The controlled environment surrounding manufacturing	83
Barrier Zone 5 — The plant	83
Barrier Zone 6 — The entrance	83
Barrier Zone 7 — The building exterior	83
Designing a Cleaning/Sanitization Program	84
Tools and equipment	85
Techniques and methods	87
Selection of Cleaning Agents, Disinfectants and Sporicides	90
Rotation	92
Testing of Surfaces	93
Frequency and Documentation	94
Summary	95
References	95
About the Author	96

7	SINGLE-USE SYSTEMS FOR CONTAMINATION CONTROL	97
	<i>Maik W. Jornitz</i>	
	Introduction	97
	Present-day Single-use Technologies	98
	Liquid hold and mixing bags	99
	Filtration, separation and purification technology	106
	Product and component transfer	116
	Sterile connections and disconnections	117
	Final filling systems	119
	Forthcoming Technologies	122
	Up-stream opportunities	122
	Downstream opportunities	123
	Single-use process engineering	126
	Facility and process designs	130
	References	131
	About the Author	133
8	SELECTING AN APPROPRIATE PROCESS CLEANING DETERGENT	135
	<i>Mark Compo</i>	
	Cleaning Versus Decontamination	136
	Decontamination Agents as Good Cleaning Agents	137
	Detergent Selection	140
	Cleaning considerations	144
	Cleaning variables	152
	Effluent concerns	154
	Process cleaning products	155
	Cleaning analysis	160
	Determining cleanliness	165
	Program support	168
	Summary	169
	References	169
	Glossary	170
	About the Author	171
9	DISINFECTANT QUALIFICATION	173
	<i>Ziva Abraham</i>	
	Regulatory Authority	176
	Label Claim Testing	177
	Carrier tests	179

In-use or field tests	179
Reasons for Conducting Disinfectant Qualification Studies	180
Understanding the Disinfectants Commonly Used	
in the Industry	180
Phenolic compounds	181
Quaternary ammonium compounds	181
Alcohols	182
Bleach (sodium hypochlorite)	182
Peroxygens	183
Disinfectant Qualification Studies	184
Suspension Tests	186
Surface Challenge Tests	187
Disinfectant Qualification Protocol Considerations	189
Who will execute the study?	189
Who will draft the protocol?	190
Choice of organisms	190
Purity of organisms	191
Choice of media, growth promotion and sterility for buffers	191
Preparation of Disinfectants	192
Contact time to be tested	192
Number of surfaces to be tested	192
Sterilization of hard surface coupons	193
Enumeration for target inoculum	193
Maintenance of inoculum	194
Inoculum verification	194
Neutralization Studies	194
Recovery loss considerations	196
Verification of inoculum	196
Efficacy Study	196
Expiry Studies	197
Disinfectant Qualification Report	197
Conclusion	198
References	199
About the Author	201
10 ENVIRONMENTAL MONITORING FOR NON-STERILE OPERATIONS	203
<i>Miriam Rozo</i>	
Cleaning and Sanitization	204
Developing the Baseline	205
The Qualification Phase, Establishing the Environmental Monitoring Program	207

Routine Environmental Monitoring Program	208
Alert and Action Levels	209
Calculating Alert and Action Levels, Percentiles	210
Investigations	211
Characterization	211
Summary	213
References	214
About the Author	215

II FUNGAL AND BACTERIAL SPORES: CONTAMINATION AND DISINFECTION 217

<i>Jim Polarine, Carol Barnett and Dan Klein</i>	
Introduction	217
Contamination Incidents	218
Overview of Fungal and Bacterial Spores	225
Fungal spores	225
Bacterial spores	226
Disinfection	228
Overview	228
Susceptibility to disinfection	229
Fungal spore disinfection	231
Alcohols	233
Alkaline phenolics	234
Acidic phenolics	235
Quaternary ammonium compounds	236
Chlorine	237
Peroxygens	238
Bacterial spore disinfection	238
Chlorine	239
Peroxygens	240
Chlorine dioxide	240
Vaporized Hydrogen Peroxide	241
Ozone	241
Formaldehyde	242
<i>Bacillus cereus</i> : disinfection	242
Disinfectant Testing	245
Time kill method	248
Surface testing methods	249
Conclusion	250
References	250
About the Authors	255

12	MICROBIAL CONTROL: MOLD	257
	<i>Brian G. Hubka</i>	
	Introduction	257
	Fungal Contamination in Pharmaceutical Environments	258
	Other Concerns with Fungi	259
	Mycotoxins	261
	Types of mycotoxins	261
	CDC authorized review	262
	Fungi Growth Factors	263
	Fungi Contamination Control	264
	Environmental Control	264
	Physical Methods of Control	265
	Control by Antimicrobial Products	266
	Mold Spores	267
	Mold Barrier Approach to Contamination Control	268
	MoldGuardian™ Product Testing	270
	References	273
	About the Author	275
13	STERILITY TEST FAILURE INVESTIGATIONS	277
	<i>Jeanne Moldenhauer</i>	
	Introduction	277
	Sterility Testing Methods	278
	Compendial Guidance on Sterility Test Investigations	279
	FDA Guidance on Sterility Test Investigations	280
	When a Sterility Test Failure is Identified	281
	Procedures for Conducting the Investigation	282
	Assessing the Validity of the Sterility Test Result	282
	Conducting the Investigation	284
	Identification of the sterility test contaminant	284
	Review of laboratory test results and deviations	285
	Microbial monitoring of the production area environment	287
	Microbial monitoring of personnel	289
	Product presterilization bioburden evaluation	290
	Production records review	290
	Review of the manufacturing history	291
	Product Impact Analysis	291
	Concluding the Investigation	292
	Determining the Final Product Disposition	283
	References	293
	About the Author	294

14	ENDOTOXINS	295
	<i>Karen Zink McCullough</i>	
	Identification of Endotoxin Control Measures	296
	Identification of Sources of Endotoxin Contamination	298
	Critical Control Points in Processing for Endotoxin Control	303
	Process step 1. Raw materials	309
	Process step 2. Formulate in WFI	310
	Process step 3. Bulk hold	311
	Process step 4. Sterile filtration	312
	Process step 5. Bulk hold, sterile	312
	Process step 6. Filling	313
	Depyrogenation of stoppers and vials	313
	Environment	314
	Filling operators	314
	Process step 7. Laboratory testing	315
	Validation of Depyrogenation Processes	317
	Summary	319
	References	320
	About the Author	322
15	AN AUDIT APPROACH TO ADDRESS MICROBIAL CONTAMINATION IN PROCESS EQUIPMENT	323
	<i>Paul Lopolito and Elizabeth Rivera</i>	
	Introduction	323
	Part 1: Pre-inspection Work	325
	Different types of microbial contamination	325
	Importance of microbial identification	326
	Understanding historical significance and microbial resistance	328
	Material flow diagrams and equipment drawings	330
	Cleaning process design control	330
	Part 2: Inspection	331
	Raw materials, processing aids and packaging components	332
	Personnel and room environment controls	334
	Utilities (water, steam, compressed air and gases)	336
	Walk-through of process and traffic flow of personnel and waste	337
	Processing equipment and elements affecting microbial decontamination	337
	Residue type and cleaning parameters	338
	Surface and process equipment design	342

Sterilization or high-level disinfection parameters	352
Conclusion	354
References	355
About the Authors	359
16 IMPACT OF BIOFILMS IN CONTAMINATION CONTROL	361
<i>Lucia Clontz</i>	
Introduction	361
Biofilm Structure	362
Biofilm Phenotype and Resistance	363
Biofilm Development and Maturation	364
Biofilm Dispersion	365
Biofilm Control in Drug Manufacturing	365
Sources and control of microbial contamination	366
Biofilms in production equipment	367
Biofilm in water systems	373
Biofilm Detection and Quantitation	373
Biofilm Remediation	376
Conclusion	378
References	378
About the Author	381
17 DEVIATIONS AND INVESTIGATIONS	383
<i>Frank Settineri</i>	
Introduction	383
Is it Real?	385
Are Marketed Products Safe?	390
Summary	397
Conclusion	397
What's the Risk?	397
What's the Root Cause?	407
Process flow	409
Corrective and Preventive Actions	413
CAPA Effectiveness	416
Summary	417
References	419
About the Author	421

18	CONTAMINATION CONTROL RISK ASSESSMENT	423
	<i>Tim Sandle</i>	
	Introduction	423
	Sources of Contamination	425
	The Regulatory Focus on Quality Risk Management	428
	Objectives of Risk Assessment and Risk Management:	
	The Key Concepts	430
	Contamination Control Risk Assessment	433
	Methods for prospective risk assessments	433
	Simple risk assessment tools	433
	Advanced risk assessment tools	440
	Fault Tree Analysis	442
	Hazard and Operability studies	444
	Failure Mode and Effects Analysis	446
	Hazard Analysis Critical Control Points	450
	Assessing retrospective contamination events	457
	Example 1: Estimating the risk to product using settle plate counts	459
	Example 2: Finger plate assessment	460
	Example 3: Surface sample assessment	464
	Example 4: Air-sample assessment	467
	Example 5: Assigning a risk factor to areas of the cleanroom	468
	Example 6: Potentially contaminated product	469
	Conclusion	470
	References	471
	About the Author	474
19	THE ROLE OF IN-HOUSE MICROBIAL ISOLATES IN CONTAMINATION CONTROL	475
	<i>Robert Westney</i>	
	Introduction	475
	Discussion	476
	The debate over inclusion of in-house microbial isolates in compendial testing	476
	Disinfectant efficacy testing	479
	Media growth promotion testing	482
	Test method suitability/qualification	486
	Rapid Microbiological Methods	487

Contents

xiii

Selection of in-house isolates	488
The role of in-house isolates in contamination control	494
Conclusion	497
