CONTENTS

What the Reviewers are Saying Dedication Foreword

INTRODUCTION	
For Laboratory Professionals and Those Entering Laboratory Work	I
For Laboratory Managers	3
For IT Professionals	3
The Modern Laboratory	4
Why are People Interested in Informatics and Automation Technology?	4
Laboratory Automation — How we Increase Productivity	8
Technology Management	11
Organization of the Material	12
References and Notes	16

I	THE LABORATORY BENCH	19
	How Computers Changed how we Work with Instruments	21
	Packaged Instrumentation	24
	Why is this important to you?	26

v

vi Computerized Systems in the Modern Laboratory: A Practical Guide

The Use of Instrument Systems in Laboratory Work	24
Technology Management	27
Simple Packaged Digital Instrument	29
Purchasing considerations	32
Multi-component instrument — computer systems	33
Single-Use Vendor Provided Instrument–Computer Systems	34
Data files	38
Support issues to consider as part of the purchase process	43
Moving onto more complex, but potentially	
beneficial configurations	48
Multi-user, Multi-instrument Systems	49
Moving to the Left of the Sample Preparation > Instrument	
> Computer Model	52
Single-point sample preparation, multi-instrument distribution	57
Preparing Samples for Analysis, Sample Processing	58
Project justification, Return-on-Investment (ROI)	60
Preparing for electronic and automaed systems	66
Change in the nature of work	82
Sample storage management	83
Standardization of containers	86
Inventory control	87
Method of access	88
References	88

LABORATORY SUPPORT	91
The Emergence of Laboratory and Scientific Support Specialization	94
The Role of LAB-IT in Planning	99
Reporting Relationships	99
LAB-IT Functions	101
LAB-IT Professionals Need to be Educated for Their Work	108
Scientific Information Specialists	110
References	
	LABORATORY SUPPORT The Emergence of Laboratory and Scientific Support Specialization The Role of LAB-IT in Planning Reporting Relationships LAB-IT Functions LAB-IT Professionals Need to be Educated for Their Work Scientific Information Specialists References

3 LABORATORY INFORMATICS/ DEPARTMENTAL SYSTEMS

Comparing Two Different Laboratory Operational Environments	118
Informatics and Laboratory Functions	127
Instrument data capture	131
Sample Tracking — LIMS and LIS	132

113

Moving Outside of Healthcare	146
Options for LIMS Implementation	150
Enterprise Resource Planning Systems	150
Software as a Service (SaaS)	154
Use of mobile media — tablets and smart-phones	164
Summary	166
References	167
Use of mobile media — tablets and smart-phones Summary References	64 66 67

Contents

4 LABORATORY INFORMATICS/DEPARTMENTAL SYSTEMS: SCIENTIFIC DATA MANAGEMENT SYSTEMS, LABORATORY EXECUTION SYSTEMS, ELECTRONIC LABORATORY NOTEBOOKS

Record Keeping — Scientific Data Management Systems	
SDMS and knowledge/information/data flow	175
Importing files	179
Regulatory compliance support	183
Notebooks	183
Record Keeping — Electronic Laboratory Notebooks	193
Options for ELN implementations	198
ELNs — corporate considerations	206
Inventory Management	211
Document and Knowledge Management	213
References	221
Additional references	223

5 LABORATORY SYSTEMS: CURRENT STATE, PAPERLESS, INTEGRATION, AND TECHNOLOGY PLANNING

Paperless Laboratories	231
Integration	233
The Need for Technology Planning, the Need for a Science	
Technology Specialist	234
Tecnology Planning — The Need for a 30,000 Foot View	237
Technology Management — Build or Buy?	238
Technology Planning and Management — Software	242
References	249
