ABOUT THIS BOOK

This book is about failure in pharmaceutical manufacturing — its causes, detection, correction and the teachings and lessons implicit in it.

No human endeavor is perfect and the manufacture of pharmaceuticals is no exception. People simply make mistakes and even well-conceived systems occasionally fail. As evidenced by the examples in this book, when errors occur pharmaceutical manufacturing systems are usually robust enough to detect them and prevent defective products from reaching consumers, but not always.

The errors that occur can provide valuable information to improve imperfect systems and lessons to improve personnel performance and understanding. Often these lessons provide the foundational “why” that is so necessary to put into perspective for manufacturing and quality control personnel the need for a particular practice or procedure. People learn best when they understand why a procedure or practice is important and what can happen if it isn’t followed.

This book provides many examples of failures that have actually happened. Careful study of these failures will lead to better understanding of why they occurred and what might have been done to prevent them. The “lessons” in this book can be used, through training and systems review, to prevent these types of failures.

Many thanks to the people who contributed to this book. Their insights and investigations into the causes of failure are invaluable. We have chosen not to link the lessons to their authors to preserve anonymity and to “protect the innocent” so to speak. Further, we believe candid presentation and discussion of these lessons increases their value and may encourage others to share their experiences.

One final thought before you begin your journey through these lessons: “Murphy” is always watching.

CONTENTS

1	Two Wrongs Don't Make a Right	1
2	Loss of a Single Freeze Dryer Load; Doubles Capacity	5
3	Fungal Contamination of Allopurinol Tablets	7
4	Contaminated Product Complaint	11
5	Where's the Flow?	17
6	Endotoxin Testing	21
7	Bioreactor Contamination	23
8	Media Fill Failure: Blow-Fill-Seal Aseptic Processing	27
9	Validation Study Design and Assumptions	31
10	Bacterial Contamination of Alcohol Swabs	37
11	Whom Do You Trust – Head of R&D or Junior Engineer?	41

12	White Precipitate 2	45
13	Environmental Monitoring	49
14	<i>Fusarium</i> Keratitis Outbreak Associated with a Reformulated Contact Lens Solution	51
15	Environmental Monitoring and the Human Factor	55
16	Viral Contamination of Early Batches of the Salk Polio Vaccine	59
17	2, 4, 6-Tribromoanisole Taints OTC Drug Products	63
18	Of Course it is Better	67
19	There's Something Wrong with the Biological Indicators	71
20	Disintegration	77
21	Gaskets	81
22	The Change is Not Critical – or is it?	87
	Current Regulations, Guidances, Technical Reports and Texts Useful For Further Reference	91
