Technical Report No. 86
Industry Challenges and Current Technologies for Pharmaceutical Package Integrity Testing
Authors and Contributors

Donald Singer, Ecolab Life Sciences, Co-Chair
Marla Stevens-Riley, PhD, Food and Drug Administration, Co-Chair
Roger Asselta, Genesis Packaging Technologies
Marcus Adams, Merck
Kate Davenport, Hollister
Patrick Evrard, PALL Life Sciences
Patrick Gallagher, SCHOTT AG
Dana Guazzo, PhD, Consultant
Olivia Henderson, PhD, Amgen
Marc Hogreve, Sartorius
Chris Knutsen, Bristol-Myers Squibb Company
Carole Langlois, Sartorius
Li Lei, Eli Lilly

James Mellman, PhD, SHL Medical
Sangeetha Ravindran Nair, MS, Baxter Healthcare Corporation
Paul Priebe, Qosina
Heino Prinz, Rommelag
Mike Sadowski, Baxter Healthcare Corporation
Hemi Sagi, Advanced Test Concepts (ATC), Inc.
Andrea Simonetti, Pharma Inspection Equipment
Oliver Stauffer, Packaging Technologies & Inspection (PTI)
James Veale, Lighthouse Instruments
Heinz Wolf, PTI
Seung-Yil Yoon, AbbVie
Justine Young, Crohn’s & Colitis Foundation
Brandon Zurawlow, CS Analytical

Contributors

Thomas Brenner
Anil-Kuma Busimi
Jeff Carter
Christoph Herdlitschka
Carl Hitscherich
Laurent Jeanmart
Joshua Lance
Duncan Low
Anthony Marchesano
Chardientie Minns

Ron Mueller
Jayshree Patel
Vishwas Pethe
Mihaela Simianu
Destry Sillivan
Moli Wan
Sonja Wicks
Terry Wilhide
Joerg Zimmermann

Table of Contents

1.0 INTRODUCTION ................................................. 1
  1.1 Purpose and Scope ........................................ 2

2.0 GLOSSARY ....................................................... 2
  2.1 Abbreviations ............................................. 3

3.0 CHALLENGES WITH METHODOLOGIES ................. 3
  3.1 Positive Controls ........................................ 3
    3.1.1 Considerations for Selecting Positive Controls .......... 4
    3.1.2 Considerations When Using Positive Controls ....... 4
    3.1.3 Types of Simulated Positive Controls .......... 5
    3.1.4 Calibrated Leaks .................................. 7
    3.1.5 Additional Considerations for Controls .... 8
  3.2 Blockage of Leak Paths ................................... 9

4.0 CHALLENGES WITH PACKAGE DESIGN ................. 10
  4.1 Prefilled Syringes ......................................... 10
    4.1.1 Design ............................................. 10
    4.1.2 Challenges ......................................... 13
    4.1.3 Test Method Consideration .......................... 16
    4.1.4 Additional Considerations for Secondary Packaging .... 17
  4.2 Single-Use Systems — Flexible Bulk Containers ... 17
    4.2.1 Design ............................................. 17
    4.2.2 Challenges ......................................... 18
    4.2.3 Test Method Considerations ........................ 18
    4.2.4 Additional Considerations for Flexible Bulk Packaging Systems .......... 20
  4.3 IV Bags — Flexible Finished Pharmaceutical Containers .... 20
    4.3.1 Design ............................................. 20
    4.3.2 Challenges ......................................... 20
    4.3.3 Test Method Considerations ........................ 21
    4.3.4 Additional Considerations for IV Bags ........ 22
  4.4 Cryogenic Conditions ....................................... 22
    4.4.1 Design ............................................. 22
    4.4.2 Challenges ......................................... 24
    4.4.3 Test Method Considerations ........................ 25
    4.4.4 Additional Considerations for Cryogenic Conditions .... 25

5.0 INNOVATIVE METHODS FOR EXISTING TECHNOLOGIES ................. 26
  5.1 Helium Testing ............................................. 26
    5.1.1 Application ......................................... 26
    5.1.2 Test Equipment and Parameters .................... 27
    5.1.3 Leak Detection Limit ................................ 27
    5.1.4 Considerations and Challenges .................... 28
  5.2 Optical Emission Spectroscopy ............................ 28
    5.2.1 Application ......................................... 28
    5.2.2 Test Equipment and Parameters .................... 28
    5.2.3 Leak Detection Limit ................................ 29
    5.2.4 Considerations and Challenges .................... 30
  5.3 Airborne Ultrasound ....................................... 30
    5.3.1 Application ......................................... 30
    5.3.2 Test Equipment and Parameters .................... 30
    5.3.3 Leak Detection Limit ................................ 33
    5.3.4 Considerations and Challenges .................... 33
  5.4 X-Ray Detection ........................................... 33
    5.4.1 Application ......................................... 33
    5.4.2 Test Equipment and Parameters .................... 34
    5.4.3 Leak Detection Limit ................................ 35
    5.4.4 Considerations and Challenges .................... 37

6.0 ADDITIONAL CONSIDERATIONS FOR PACKAGE INTEGRITY PROFILING ................. 38
  6.1 Transportation and Distribution ......................... 38
    6.1.1 Physical Stressors .................................. 38
    6.1.2 Pressure ............................................ 38
    6.1.3 Testing Approaches ................................. 39
  6.2 100% Online Testing ....................................... 39
  6.3 Building a Quality by Design Approach into the Container Closure Integrity Testing Program ... 40
    6.3.1 Risk Assessment ..................................... 42
    6.4 Bulk Container Lifecycle Approach ..................... 42
    6.5 Educational Simulation about Limits of Detection and Method Selection ................. 44

7.0 CONCLUSION .................................................. 47

8.0 REFERENCES .................................................. 48

9.0 ADDITIONAL READING ........................................ 49

FIGURES AND TABLES INDEX

Table 3.1.4-1 Summary of Common Positive Controls or Engineered Defects .......... 8
Figure 4.1.1-1 Diagram of Prefilled Syringe .................................. 10
Figure 4.1.1-2 Staked Needle Interfaces .................................. 11
Figure 4.1.1-3 Common Luer Lock Syringes ................................. 12
Figure 4.1.1-4  Common Luer Cone (Luer Slip) Syringes ........................................ 12
Figure 4.2-1  Mobius® 2-D Bag Assemblies from Merck Millipore and Flexsafe® 3-D Bag Assembly from Sartorius .... 18
Table 4.2.3-1  Comparison of Physical SUS Integrity Testing Methods ........................................ 19
Figure 4.4.1-1  Headspace Carbon Dioxide (CO2) Pressure in a Set of 20 Vials Stored on Dry Ice at -80 °C; Three Vials Show Elevated Levels of CO2 ......................... 23
Figure 4.4.1-2  Headspace Oxygen Concentration in the Same Set of 20 Vials Stored on Dry Ice at -80 °C; Same Three Vials Show Reduced Levels of Oxygen ........... 23
Figure 4.4.1-3  Total Headspace Pressure in the Same Set of 20 Vials Stored on Dry Ice at -80 °C; Same Three Vials Show Elevated Total Pressure .................................. 23
Figure 5.1.1-1  Sample Manifold with 10 2-D Bags Attached to a Central Fluid Line with 70+ Joining Points ................. 26
Figure 5.1.3-1  Comparison of Helium Leak Rates of a Nondefective Bag versus a Defective Bag ........................................ 27
Figure 5.3.2-1  Airborne Ultrasound Through Transmission .............................................. 31
Figure 5.3.2-2  Propagation of Ultrasound Through Material Being Tested ........................................ 31
Figure 5.3.2-3  Ultrasound Single Linear Scan Graph of Channel Defect within a Pouch Seal ........................................ 32
Figure 5.3.2-4  Ultrasound Composite Scan/ Optoacoustic Image of Channel Defect within a Pouch Seal ............. 32
Figure 5.4.2-1  Principle of the Line Scan Imaging Technique .............................................. 34
Figure 5.4.2-2  Principle of the Area Scan Imaging Technique .............................................. 34
Figure 5.4.3-1  X-Ray Picture of a Large Crack in the Syringe Barrel Inside an Auto-Injector Device .................... 35
Figure 5.4.3-2  X-Ray Picture of a Vial with a Glass Defect at the Rim under the Crimp and Automated Detection of the Defect .............................................. 36
Figure 5.4.3-3  X-Ray Picture of an Ampoule Neck with a Glass Cut Detection of the Defect .................... 36
Figure 5.4.3-4  X-ray Picture of Needle Socket with the Glue made Visible ........................................ 36
Figure 5.4.4-1  Comparative CT Scans of Four Different Elastomers Used to Calculate Stopper Compression and Fit; Stopper D Shows Signs of Dimpling ......................... 37
Table 6.4-1  Considerations for Single-Use System’s Lifecycle at User’s Site .......... 43
Figure 6.4-1  Single-Use System’s Lifecycle at Manufacturing Site by User ................. 43
Figure 6.4-2  Single-Use System’s Lifecycle at User’s Site .............................................. 43
Table 6.5-1  Leak Test Method Detection Limit and Accuracy Determination Example .... 46
