Cleaning and Cleaning Validation, Volume 1

Contents

Key Considerations for Cleaning in the Laboratory 55
Conclusions 56
About the Author 57

4 THE CLEANING VALIDATION POLICY AND THE CLEANING VALIDATION PLAN 59

Miguel Montalvo

Introduction 59
FDA Perspective 60
The Cleaning Validation Policy 61
  Develop an outline 62
  Equipment design review 63
  SOPs and operational cleaning procedure review 64
  Matrix development 65
  Worst case selection 66
  Sampling plan and limits determination approach 66
  Target residue identification 67
  Analytical methods requirements 68
  Cleaning validation documents 68
  Cleaning validation maintenance 68
The Cleaning Validation Plan 69
  Cleaning validation plan outline 70
Cleaning Validation Protocol 71
Execution of the Cleaning Tests 72
Summary Report 72
Summary and Key Points 72
References 73
About the Author 73

5 GLOBAL REGULATORY INSPECTIONS STANDARDS FOR CLEANING VALIDATION 75

Clive G. Blatchford

Introduction 75
Regulatory Inspections Preparation for an Inspection 75
  Preparation in the facility 76
  Preparation in the meeting room 78
Global Guidance Documents 82
  US FDA 82
  Canada 82
  Europe (and PIC/S) 82
ICH 83
Misconceptions 83
Defects and Failures — Where did it all go Wrong? 84
  Barr Laboratories 84

About the Authors

SECTION TWO
GENERAL TECHNICAL PRINCIPLES — CLEANING CHEMISTRY AND ENGINEERING

CLEANING AGENTS AND CLEANING CHEMISTRY

George Verghese and Nancy Kaiser

Introduction
Factors to Consider when Selecting Cleaning Agents
Broad-spectrum cleaning effectiveness
Substrate compatibility
Stability and shelf life
Analyzeability
Disposal
Regulatory compliance
Safety
Toxicity
Foaming
Microbial control
Manufacturing quality and GMP
Cleaning Chemistry Mechanisms
Wetting
Emulsification
Cleaning and Cleaning Validation, Volume 1

Contents

Dispersion 111
Solubility 112
Chelation 112
Oxidation 112
Hydrolysis 113
Cleaning Agent Options 113
Water 113
Commodity alkalis and acids 114
Organic solvents 114
Surfactants 114
How surfactants work 115
Surfactant types 115
Anionic surfactants 115
Cationic surfactants 116
Amphoteric surfactants 116
Nonionic surfactants 116
Formulated detergents 117
Components of formulated detergents 117
Surfactants 117
Alkalis 117
Acids 118
Sequestrants/chelants 118
Dispersants/anti-redeposition agents 118
Corrosion inhibitors 118
Oxidizing agents 118
Enzymes 119
Buffers/builders 119
Preservatives 119
Advantages and disadvantages of various options 119
Summary 120
References 120
About the Authors 121

8 CLEANING ENGINEERING AND EQUIPMENT DESIGN 123
George Verghese and Paul Lopolito

Introduction 123
Cleaning Process Parameters — TACT 125
Time 125
Action 126
Concentration 126
Temperature 127
Factors Related to the Soil or Residue 127
Soil levels 128
Soil condition 128
Case study #1 128
Hold times (dirty and clean) 129
SECTION THREE
GENERAL TECHNICAL PRINCIPLES — RESIDUES

9 RESIDUES AND CLEANING CHEMISTRY
William R. Porter

Introduction
Factors Affecting Solubility
   Lipophilicity and solubility
   Ionizability and solubility
   Surfactants and solubility
Factors Affecting Chemical Stability
   Kinetics of degradation of APIs and excipients
   Reaction mechanisms and kinetics
   Effect of temperature of reaction rates
   Common degradation pathways
Cleaning and Cleaning Validation, Volume 1

Contents

Hydrolysis 164
Oxidation 167
Photolysis 169
Other degradation pathways 170
Impact of chemical degradation of cleaning residues 170
Factors Affecting Physical Stability 170
Types of phase transformations 171
Conclusions 173
References 173
About the Author 175

10 MICROBIAL AND ENDOTOXIN RESIDUES — PRODUCT CONTACT SURFACES 177

Jeanne Moldenhauer

Introduction 177
Where do the Requirements for Cleaning and Cleaning Validation Originate? 178
United States Food and Drug Administration (FDA) 21 CFR Part 211: Current GMP for Finished Pharmaceuticals 178
European Union Good Manufacturing Practices 179
International Conference on Harmonization: Good Manufacturing Practice Guide for Active Pharmaceutical Ingredients Q7 181
Other influential documents 183
Types of Cleaning Validation Studies 183
Cleaning Validation for Rooms or Areas 183
Environmental survey 184
Selection of appropriate cleaning agents 184
Developing and setting parameters for disinfection/sanitization 185
Development of cleaning procedures 189
In situ studies 190
Microbial recovery studies 190
Endotoxin removal studies 191
Product Contact Surfaces 191
Microbial issues in cleaning validation 191
The control of microbial residues 192
Reducing microbial residues 192
The concept of objectionable microorganisms 192
Setting acceptance criteria 193
Aseptic processes 194
Non-sterile processes 194
Viral and prion contamination 194
Types of product contact surfaces 194
Components 194
Glass components 195
Evaluations prior to product exposure 195
Following product exposure 195
Plastic containers 195
11 CLEANING OF NON-PRODUCT CONTACT SURFACES

Anne Marie Dixon

Background 221
Tools, Equipment and Supplies 220
Techniques and Methods 225
  Procedures — general 225
    Double bucket technique 225
    Triple bucket technique 225
  Procedures — specific 227
    Ceilings 227
    Walls and curtains 227
    Floors 228
    Furniture/fixtures 229
    Mats 229
    Waste receptacles 229
    Work stations and equipment — horizontal surfaces 229
Reporting 231
Frequency 231
The “Clean” Factory 231
  Zone 1 — critical zone 232
  Zone 2 — the cleanroom 232
  Zone 3 — personnel entrance 232
  Zone 4 — controlled environment — areas surrounding cleanrooms 232
  Zone 5 — the plant 232
  Zone 6 — the entrance 233
  Zone 7 — the exterior 233
Testing Procedures 233
Summary 234
References 234
About the Author 234

12 RESIDUE PHARMACOLOGY AND TOXICOLOGY CONSIDERATIONS

William H. Houser

Introduction 235
Residue Limits 236
  Residue limit/residue level 236
    The 1/1000 of the NTD approach 237
    The 10 ppm approach 238
    The no visible residue approach 238
  Establishing a health-based residue limit 239
    Limitations of the approach 241
Cleaning Limits 242
Other General Considerations 243
  Potent drugs 243
    Pharmacologist perspective 244
13 RESIDUE GROUPING STRATEGIES

William E. Hall

Introduction 265
Origin of Grouping Concept for Cleaning Validation 265
Strategy or Rationale 266
Fundamental Principles of Product Grouping 267
Decision Tree Approach 268
Level 1 of the decision tree (sterile vs. non-sterile) 268
Level 2 of the decision tree (dosage form) 268
Level 3 of the decision tree (products) 269
Level 4 of the decision tree (equipment) 269
Level 5 of the decision tree (cleaning procedure) 271
Cleaning procedure (definition) 272
Identification of the Worst Case(s) Representative Product in each Group 273
Step 1 in worst case determination — assemble the data 273
Step 2 — “Torture the data until it confesses” — evaluate the data and determine the worst case product(s) 274
Identification of a Worst-Case Ingredient in a Cleaning Agent Formulation 276
Case Studies

### SECTION FOUR

**SPECIFIC RESIDUES FOR CLEANING — PART 1**

17 BIOTECH RESIDUES AND CLEANING 383

Jennifer Carlson

Introduction 383

Production Processes 384
  - Recombinant protein produced through a mammalian cell line 384
    - Cell culture 385
    - Harvest 386
    - Purification 387
    - Formulation, freezing, and aseptic filling 387
  - Protein produced through bacterial fermentation 388
    - Fermentation 388
    - Initial recovery process 389
    - Purification 389
    - Formulation, freezing, and aseptic filling 390

Process Ingredients 390

Equipment 391
  - Impact of material of construction 391
  - Tanks 391
    - Design considerations 391
    - Cleaning considerations 393
    - Cleaning cycle considerations 395
