| About the Authors     | xxi   |
| List of Abbreviations | xxvii |

## CHAPTER 1: INTRODUCTION

|  |   |
|--|---|
| <i>Jeanne Moldenhauer</i>                              | 1 |
| Background   | 1 |
| What is a Meaningful Monitoring Program?               | 2 |
| What is a Manageable Environmental Monitoring Program? | 2 |
| Defendable   | 3 |
| Applicability  | 3 |
| Summary  | 3 |

## PART 1 – GENERAL INFORMATION

## CHAPTER 2: PRACTICAL ISSUES IN DESIGNING AND IMPLEMENTING AN ENVIRONMENTAL CONTROL PROGRAM

|  |    |
|--|----|
| <i>Jeanne Moldenhauer</i>  | 7  |
| Introduction   | 7  |
| Regulatory Expectations for Environmental Monitoring             | 8  |
| Practical Issues in Designing a Control Program                  | 12 |
| Cleaning, Sanitization and Disinfection Procedures to be Used    | 12 |
| Standards to be Applied  | 12 |
| Identification of the Room Classification Required for Each Area | 13 |
| Selection of Sampling Methods and Equipment                      | 13 |

|  |    |
|--|----|
| Incubation and Recovery Conditions                 | 14 |
| Validation of Methods                              | 15 |
| Selection of Equipment                             | 16 |
| Selection of Sampling Sites                        | 16 |
| Establishing Levels/Limits                         | 17 |
| Data Collection Methods                            | 17 |
| Data Analysis and Management                       | 17 |
| Identification/Characterization of Isolates        | 19 |
| Isolators  | 20 |
| Data Misapplications                               | 21 |
| Cost of Testing                                    | 22 |
| Root Cause Analysis for Deviations                 | 22 |
| Performing Investigations                          | 23 |
| Evaluating the Effectiveness of Corrective Actions | 23 |
| Management Oversight                               | 24 |
| Designing a Cleanroom for the 21st Century         | 24 |
| Conclusions  | 24 |
| Acknowledgements                                   | 25 |
| Related Literature                                 | 25 |

### **CHAPTER 3: COMPLIANCE ISSUES FOR ENVIRONMENTAL MONITORING**

*Jeanne Moldenhauer* **27**

|  |    |
|--|----|
| Introduction   | 27 |
| Written Program                                      | 27 |
| Standard Operating Procedures (SOPs)                 | 28 |
| Setting Levels and Trending of Data                  | 29 |
| Sanitization Efficacy                                | 30 |
| Monitoring Methods                                   | 30 |
| Air Monitoring                                       | 30 |
| Surface Monitoring                                   | 31 |
| Personnel Monitoring                                 | 31 |
| Particulate Monitoring                               | 31 |
| Microbiological Media and Identification of Isolates | 31 |
| Terminal Sterilization Processes                     | 32 |
| Aseptic Sterilization Processes                      | 32 |
| Non-Sterile Processes                                | 32 |

### **CHAPTER 4: ENVIRONMENTAL CONTROL SYSTEMS USED IN PARENTERAL FACILITIES**

*Franco De Vecchi* **33**

|  |    |
|--|----|
| Contamination Control in Pharmaceutical Facilities | 33 |
|--|----|

|  |    |
|--|----|
| Quality by Design  | 34 |
| User Requirements Definition   | 35 |
| Functional Requirements Specifications (FRS)                                 | 37 |
| Environmental Control System   | 39 |
| Environmental Risk Assessment/Hazard Analysis Critical Control Point (HACCP) | 45 |
| Environmental Parameters Selection Considerations                            | 47 |
| Pressure Differential Gradients  | 49 |
| Air Changes per Hour, Dilution, and Recovery                                 | 49 |
| Turbulent, Unidirectional airflow  | 51 |
| Layout Considerations Based on Area Classifications                          | 52 |
| Controlled Environment Design Considerations                                 | 53 |
| Layout and Architectural Components  | 53 |
| Heating, Ventilation and Air Conditioning (HVAC)                             | 54 |
| Air Distribution Network (Ducting)   | 56 |
| Personnel Contamination Control System                                       | 58 |
| Cleaning and Disinfection  | 58 |
| Isolators  | 58 |
| Restricted Access Barriers Systems (RABS)                                    | 59 |
| Bio-hazard Contamination Control   | 60 |
| Validation Approach and Considerations                                       | 60 |
| Facility and HVAC System Commissioning                                       | 60 |
| Validation   | 61 |
| Equipment Systems Purchasing Practices and Commissioning and Validation      | 62 |
| Validation Approach  | 62 |
| Validation Program Organization  | 64 |
| Validation Documentation Issuance and Control                                | 64 |
| Protocols  | 64 |
| Validation Program Coordination and Execution Procedures                     | 65 |
| Validation Data Review and Final Summary Preparation                         | 66 |
| Environmental Control System Validation                                      | 66 |
| Protocols  | 67 |
| Architectural Systems Validation   | 67 |
| Design Qualification (DQ) Protocol   | 67 |
| Installation Qualification (IQ) Protocol                                     | 68 |
| Other Verifications  | 69 |
| Operational Qualification (OQ) Protocol                                      | 70 |
| Operational Qualification Tests  | 70 |
| Performance Qualification (PQ) Protocol                                      | 71 |
| HVAC/Control and Monitoring System Validation                                | 71 |
| HVAC System Design Qualification Protocol                                    | 71 |
| Installation Qualification Protocol  | 71 |

|  |    |
|--|----|
| Calibration Verification                                 | 72 |
| Standard Operating Procedure (SOP) Verification          | 72 |
| Utilities Connections Verification                       | 72 |
| Operational Qualification Protocol                       | 73 |
| Operational Qualification Objective                      | 73 |
| Instrumentation Calibration Verification                 | 73 |
| Testing Equipment Calibration Verification               | 74 |
| Standard Operating Procedure (SOP) Verification          | 74 |
| Operational Qualification Tests                          | 74 |
| Air System Balancing/Pressure Differential Test          | 74 |
| HEPA Filter Integrity Test (DOP Test)                    | 74 |
| Pressure Differential Stress Test                        | 75 |
| Control and Monitoring Devices Test                      | 75 |
| Recovery Test  | 76 |
| Laminar (Unidirectional) Airflow Systems Validation      | 76 |
| Airflow Velocity and Uniformity Test                     | 76 |
| Airflow Parallelism Test                                 | 77 |
| Airflow Patterns   | 77 |
| Performance Qualification                                | 77 |
| Temperature/Humidity Control Test                        | 77 |
| Air Cleanliness Test (Non-Viable Particle Counting)      | 78 |
| Airborne Bioburden Test                                  | 78 |
| Surface Bioburden Test                                   | 78 |
| System Qualification Statement and Qualification Summary | 79 |
| Conclusion   | 79 |

## CHAPTER 5: UNIDIRECTIONAL AIRFLOW DEVICES

*Allan Pfitzenmaier*

**81**

|  |    |
|--|----|
| Introduction   | 81 |
| Performance Objectives   | 82 |
| Performance Variables  | 82 |
| Configuration Variables  | 82 |
| Plenum Size  | 83 |
| Motor/Blower Selection   | 83 |
| Speed Controls   | 83 |
| Performance Monitoring   | 83 |
| Variables within the Workspace   | 84 |
| Spatial Considerations   | 84 |
| Airflow Considerations   | 85 |
| Process Flow Considerations  | 85 |
| Controlling, Enhancing, and Optimizing Unidirectional Flow Performance | 85 |
| Controlling Initial Unidirectional Flow Performance                    | 85 |

|  |    |
|--|----|
| Enhancing Unidirectional Flow Performance      | 86 |
| Selecting Unidirectional Flow for your Process | 87 |
| Unit/System Requirements                       | 88 |
| Custom Unit or Batch Built?                    | 88 |

## CHAPTER 6: ISOLATORS AND BARRIERS

|  |           |
|--|-----------|
| <i>Jeanne Moldenhauer</i>  | <b>89</b> |
| Introduction   | 89        |
| What is the Difference Between Barriers and Isolators?                 | 89        |
| Uses of Isolators  | 92        |
| Important Features for Isolator Operation                              | 92        |
| Ventilation/Filtration   | 92        |
| Manipulation   | 93        |
| Visibility   | 93        |
| Materials Transfer   | 93        |
| General Comments on Environmental Monitoring in Isolators and Barriers | 94        |
| Environmental Monitoring in Barrier Systems                            | 94        |
| Environmental Monitoring in Isolator Systems                           | 94        |
| Decontamination  | 95        |
| Conclusion   | 96        |
| References   | 96        |
| Bibliography   | 96        |

## CHAPTER 7: CLEANROOM MICROBIOLOGY

|   |           |
|---|-----------|
| <i>Scott Sutton</i>                       | <b>97</b> |
| Classifications                           | 98        |
| Methods used for Control                  | 98        |
| Physical Barriers                         | 98        |
| Personnel Controls                        | 99        |
| Cleaning and Disinfection                 | 100       |
| Demonstration of Control                  | 104       |
| Environmental Monitoring                  | 104       |
| Personnel Monitoring                      | 106       |
| Trending of Environmental Monitoring Data | 107       |
| Microbial Identification                  | 108       |
| Summary                                   | 111       |
| References                                | 112       |

## **CHAPTER 8: PARTICLE COUNTING APPLICATIONS IN THE PHARMACEUTICAL ENVIRONMENT**

*Mark Hallworth*

**119**

|   |     |
|---|-----|
| Abstract                                | 119 |
| Introduction                            | 119 |
| History of Application                  | 121 |
| Requirements for Proof of Cleanliness   | 122 |
| Example                                 | 123 |
| Requirements for Monitoring Cleanliness | 127 |
| Unclassified Areas                      | 128 |
| Sample Point Placement                  | 130 |
| Example Continued                       | 132 |
| Automated Particle Monitoring           | 133 |
| Example – Continuous Monitoring         | 134 |
| Special Applications                    | 136 |
| Sterilizer Tunnels                      | 136 |
| Freeze Dryers                           | 137 |

## **CHAPTER 9: ESTABLISHING A DISINFECTION PROGRAM**

*Vivian F. Denny*

**139**

|   |     |
|---|-----|
| Steps to Developing a Disinfection Program            | 141 |
| Formation of a 'Project Team'                         | 141 |
| Commencing the Development of the Program             | 141 |
| Reviewing the Findings                                | 142 |
| What to Ask during the Review Process                 | 142 |
| Planning and the Writing of the Program               | 143 |
| Document Finalization                                 | 143 |
| Implementation of the Program                         | 144 |
| Important Teaching Points                             | 144 |
| Going Real Time                                       | 144 |
| Perfection Comes with Practice                        | 145 |
| Program Feedback                                      | 145 |
| Formal Auditing                                       | 145 |
| Review Program Documents Routinely                    | 146 |
| Training of Personnel and Determination of Competency | 146 |
| Training and Regulations                              | 146 |
| Developing a Training Program                         | 147 |
| Conclusion  | 149 |
| References  | 149 |

**CHAPTER 10: DISINFECTANTS***Vivian F. Denny***151**

|  |     |
|--|-----|
| Disinfectants Activity and Mechanism of Action | 152 |
| Alcohols                                       | 152 |
| Aldehydes                                      | 153 |
| Formaldehyde (Methanal)                        | 153 |
| Gluteraldehyde (Pentanedial)                   | 153 |
| Ortho-phthaldehyde (OPA)                       | 154 |
| Halogens                                       | 154 |
| Chlorine and Chlorine Containing Compounds     | 155 |
| Iodine   | 156 |
| Peroxygen Compounds                            | 156 |
| Hydrogen Peroxide ( $H_2O_2$ )                 | 157 |
| Peracetic acid ( $CH_3COOOH$ )                 | 157 |
| Phenolics                                      | 157 |
| Quaternary Ammonium Compounds (Quats)          | 158 |
| Conclusion                                     | 159 |
| References                                     | 159 |
| Websites                                       | 164 |

**CHAPTER 11: CLEANROOM SUPPLIES***Jeanne Moldenhauer***167**

|  |     |
|--|-----|
| Introduction                           | 167 |
| Cleanroom Equipment                    | 167 |
| Cleanroom Garments                     | 169 |
| Cleanroom Garments Fabric              | 169 |
| Garment Design                         | 170 |
| Sampling Devices                       | 171 |
| Swabs                                  | 172 |
| Paper and Labels Used in the Cleanroom | 172 |
| Wipes and Wipers                       | 173 |
| Vacuum Cleaners                        | 174 |
| Mops and Buckets                       | 175 |
| Sponges and Sponge Wipes               | 176 |
| Tacky Mats                             | 177 |
| Tacky Rollers                          | 177 |
| Accessories                            | 177 |
| Acknowledgements                       | 178 |
| Bibliography                           | 178 |

## **CHAPTER 12: PRACTICAL ASPECTS OF CLEANING, SANITIZING AND DISINFECTING ROOMS AND SURFACES**

*Jeanne Moldenhauer* **181**

|   |     |
|---|-----|
| Introduction  | 181 |
| Cleaning Versus Disinfection                                      | 182 |
| Aseptic Areas are not Sterile Areas                               | 182 |
| Purpose of Cleaning/Sanitizing/Disinfecting of Rooms and Surfaces | 182 |
| Who Will Perform the Cleaning Tasks?                              | 183 |
| Equipment and Supplies Used for Cleaning                          | 184 |
| Methods Utilized  | 184 |
| Frequency of Cleaning   | 185 |
| Preparation of Cleaning/Sanitizing/Disinfecting Solutions         | 185 |
| Surfactants   | 186 |
| Residues  | 187 |
| Cleaning Practices  | 187 |
| How to Clean  | 189 |
| The Double Bucket Method  | 190 |
| Use of Mops and Wipes   | 191 |
| Rotation of Cleaning Agents                                       | 191 |
| How to Verify Cleanliness   | 192 |
| Conclusion  | 192 |
| Acknowledgements  | 193 |
| Bibliography  | 193 |

## **PART 2 – VALIDATION AND QUALIFICATION**

### **CHAPTER 13: MASTERPLAN FOR MICROBIOLOGICAL MONITORING**

*Jeanne Moldenhauer* **197**

|                                       |     |
|---------------------------------------|-----|
| Introduction                          | 197 |
| Information Included in a Master Plan | 197 |
| Master Plans are Living Documents     | 199 |

### **CHAPTER 14: VALIDATION OF HVAC SYSTEMS**

*Jeanne Moldenhauer* **201**

|                  |     |
|------------------|-----|
| Introduction     | 201 |
| Validation       | 201 |
| Acknowledgements | 202 |

**CHAPTER 15: MONITORING OF UTILITIES: COMPRESSED GASES***Jeanne Moldenhauer***203**

|              |     |
|--------------|-----|
| Introduction | 203 |
| Validation   | 203 |
| Sampling     | 204 |

**CHAPTER 16: VALIDATION OF WATER SYSTEMS***Jeanne Moldenhauer***205**

|  |     |
|--|-----|
| Introduction   | 205 |
| Types of Water   | 205 |
| Source or Feed Water for Water Systems (Potable Water)       | 206 |
| Drinking Water   | 206 |
| Purified Water   | 206 |
| Water for Injection  | 206 |
| Establishment of Quality Attributes and Operating Parameters | 207 |
| Use of a Water System Drop in the Laboratory                 | 207 |
| Use of a Laboratory Water System                             | 207 |
| Design Requirements  | 208 |
| Installation of the System                                   | 210 |
| Sanitization   | 210 |
| Installation Qualification (IQ) and Testing                  | 210 |
| Operational Qualification (OQ) and Testing                   | 210 |
| Performance Qualification (PQ) and Testing                   | 210 |
| Acknowledgements   | 211 |
| References   | 211 |

**CHAPTER 17: CLEANING/SANITIZATION QUALIFICATION***Jeanne Moldenhauer***213**

|                                    |     |
|------------------------------------|-----|
| Abstract                           | 213 |
| Pre-Qualification Testing          | 213 |
| Facility Qualification             | 213 |
| Personnel Training/Qualification   | 214 |
| Selection of Sanitizing Agents     | 214 |
| Sanitizing Agent Effectiveness     | 215 |
| Manufacturer Testing               | 215 |
| User Testing                       | 215 |
| Development of Cleaning Procedures | 216 |
| Obtaining Cleanroom Supplies       | 216 |
| Qualification Activities           | 216 |

**CHAPTER 18: SAMPLING EQUIPMENT***Arthur Vellutato, Jr.***219**

|  |     |
|--|-----|
| Introduction   | 219 |
| Understanding Cleanroom Operations   | 220 |
| History of Viable Air Monitoring   | 223 |
| Viable Air Monitoring in Cleanroom Operations                              | 224 |
| The Systematic Plan of Action  | 225 |
| Step 1: Determining Sampling Locations                                     | 225 |
| Step 2: Understanding Regulatory Expectations                              | 226 |
| Step 3: Developing Alert/Action Levels and Frequency for Sampling          | 234 |
| Step 4: Designing the System of Monitoring to Meet Production Constraints  | 237 |
| Concept of Airborne Sampling   | 239 |
| Validation of Air Samplers   | 242 |
| Comparative Test Analysis  | 243 |
| Efficacy of Efficiency Sampling  | 244 |
| ISO 14698 Validation of Air Samplers                                       | 245 |
| Prior and Post Desiccation Validation                                      | 247 |
| Sampling Methods   | 248 |
| Disclaimer   | 248 |
| Non-Active Air Sampling Devices  | 249 |
| Settling Plates  | 249 |
| Membrane Filtration  | 250 |
| The Liquid Impinger  | 250 |
| The Slit-to-Agar (STA) by Mattson Garvin                                   | 251 |
| The Sterilizable Microbiological Atrium™ (SMA™) by Veltek Associates, Inc. | 251 |
| Surface to Air Sampler (SAS)   | 255 |
| Biotest Centrifugal Air Samplers (RCS)                                     | 257 |
| Millipore M Air T™   | 258 |
| bioMérieux air IDEAL   | 259 |
| Sartorius MD8™ Air Sampler   | 261 |
| Anderson N6 Single Stage Viable Impactor                                   | 263 |
| Mass 100™ Air Sampler by EMD Chemicals                                     | 263 |
| Step 5: Interpretation of Results and Trending of Data                     | 265 |
| Step 6: Corrective Actions   | 266 |
| Conclusion   | 266 |
| Bibliography   | 267 |

**CHAPTER 19: SAMPLE SITE SELECTION***Jeanne Moldenhauer***269**

|                              |     |
|------------------------------|-----|
| Abstract                     | 269 |
| Methods Available            | 269 |
| Managing Risk – Risk Control | 270 |

**CHAPTER 20: SELECTION OF SAMPLE SITES USING GRID PROFILING***Tom O'Connor***273**

|   |     |
|---|-----|
| Introduction                              | 273 |
| Determining the Number of Samples to Take | 275 |
| Establishing Grids                        | 276 |
| Plotting the Sample Sites                 | 278 |
| Sampling                                  | 279 |
| Checklist                                 | 280 |
| Conclusion                                | 280 |

**CHAPTER 21: MICROBIOLOGICAL RISK ANALYSIS***Dilip Ashtekar***281**

|  |     |
|--|-----|
| Introduction   | 281 |
| Definitions used in the Risk Assessment  | 283 |
| Risk Management Process  | 283 |
| General Procedure for Performing HACCP   | 288 |
| HACCP Principles   | 289 |
| Question Matrices for HACCP Analysis   | 289 |
| Use of HACCP Analysis of Aseptic Manufacturing Process                                 | 291 |
| Critical Process Identification  | 292 |
| Hazards and CCPs   | 293 |
| Identification of Support Processes and CCPs   | 294 |
| Identifying a Process Flow Hazard and CCPs   | 294 |
| Essential Control Points (ECPs)  | 294 |
| Control Points Limits  | 294 |
| Use of HACCP Analysis for Controlling the Risk of Microbial Contamination in Cleanroom | 295 |
| CCCS Step 1: Identification of Sources and Routes of Contamination                     | 296 |
| CCCS Step 2: Assessment of the Importance of Hazards                                   | 296 |
| CCCS Step 3: Identification of the Methods to Control the Hazards                      | 297 |
| CCCS Step 4: Sampling Method to Monitor Hazards and Control Methods                    | 297 |
| CCCS Step 5: Establish a Monitoring Schedule with Alert and Action Limit               | 297 |
| CCCS Step 6: Verification and Reappraisal of the System                                | 297 |

|   |     |
|---|-----|
| Failure Mode Effects Analysis (FMEA)  | 298 |
| Risk Analysis for Process Characterization                                    | 298 |
| Equation 1  | 299 |
| Equation 2  | 300 |
| Risk Assessment using FMECA Method for Environmental Control of Contamination | 301 |
| Equation 1  | 301 |
| Equation 2  | 302 |
| Equation 3  | 302 |
| Equation 4  | 303 |
| Equation 5  | 303 |
| Conclusion  | 304 |
| References  | 304 |

## **CHAPTER 22: PERSONNEL GOWNING**

*Jeanne Moldenhauer* **307**

|  |     |
|--|-----|
| Introduction                             | 307 |
| Regulatory Requirements for Gowning      | 307 |
| EU Requirements                          | 308 |
| FDA cGMP Requirements                    | 309 |
| ISO Guidance                             | 310 |
| Other                                    | 310 |
| Gowning in Non-Critical Processing Zones | 311 |
| Aseptic Gowning                          | 311 |
| Loss of Protection                       | 311 |
| Gowning Training Requirements            | 312 |
| Example of a Gowning Procedure           | 312 |
| Other Precautions                        | 313 |
| Personnel Monitoring                     | 314 |
| Bibliography                             | 314 |

## **CHAPTER 23: PERSONNEL MONITORING AND CERTIFICATION**

*Jeanne Moldenhauer* **315**

|   |     |
|---|-----|
| Introduction                                      | 315 |
| Human-Borne Sources of Contamination              | 315 |
| Types of Monitoring Methods Used                  | 316 |
| Sampling Sites                                    | 320 |
| When Should Monitoring Be Performed?              | 321 |
| Who Performs the Sampling?                        | 322 |
| What should be done with the Data Collected?      | 322 |
| Levels or Limits for Personnel Monitoring Results | 323 |

|   |     |
|---|-----|
| Cautions  | 323 |
| Corrective and Preventative Actions (CAPA) for Numbers Exceeding Established Levels | 323 |
| Gowning Certification/Re-Certification Programs                                     | 324 |
| Conclusion  | 326 |
| References  | 328 |

## **CHAPTER 24: TRAINING PERSONNEL TO COLLECT ENVIRONMENTAL SAMPLES**

*Michele M. Conway* **329**

|                         |     |
|-------------------------|-----|
| Introduction            | 329 |
| Behavior is Key         | 329 |
| Water Sample Collection | 330 |
| Active Air Sampling     | 332 |
| Surface Sampling        | 334 |
| Personnel Monitoring    | 335 |
| Conclusion              | 336 |
| References              | 337 |
| Further Reading         | 337 |

## **CHAPTER 25: SURFACE MONITORING**

*Jeanne Moldenhauer* **339**

|  |     |
|--|-----|
| Introduction   | 339 |
| Selection of a Surface Monitoring Test Method                          | 340 |
| Direct Agar Plating Methods  | 340 |
| Contact Plates   | 340 |
| Direct Surface Sampling with Membrane Filters                          | 341 |
| Flexible Films   | 342 |
| Swabs  | 342 |
| Surface Rinse Methods  | 343 |
| Dip Slides   | 343 |
| Validation or Qualification of Surface Monitoring Methods              | 344 |
| Calculation of the Efficiency of Bacterial Surface Sampling Techniques | 344 |
| Variability of Results Obtained for Various Surface Sampling Methods   | 347 |
| Agar Contact Plates, e.g., Rodac™ and Flexible Films                   | 348 |
| Swab Samples (Also Known as the Swab-Rinse Procedure)                  | 349 |
| Direct Agar Surface Samples  | 350 |
| Rinse Methodologies  | 350 |
| Other Sources of Variability   | 350 |
| Designing Validation or Qualification of Surface Monitoring Procedures | 352 |
| Selection of Test Microorganisms                                       | 353 |
| Selection of Test Media  | 353 |

|                     |     |
|---------------------|-----|
| Data Interpretation | 353 |
| Acceptance Criteria | 354 |
| Conclusions         | 354 |
| Bibliography        | 354 |

## CHAPTER 26: METHOD VALIDATION

|  |            |
|--|------------|
| <i>Dawn McIver</i>   | <b>357</b> |
| Introduction   | 357        |
| Surface Monitoring – Background  | 358        |
| Validation of Surface Sampling Methods   | 359        |
| Performance Qualification for Contact Plates   | 361        |
| Part 1: Determining the Percent Recovery of Contact Plates                             | 361        |
| Part 2: Determining the Efficacy of the Neutralizers in the Media for Contact Sampling | 363        |
| Performance Qualification of Swabbing Procedure  | 364        |
| 1. Determining if Swabbing Materials have Bacteriostatic/Fungistatic Effect            | 364        |
| 2. Efficacy of the Swab System   | 365        |
| 3. Determining the Efficacy of the Neutralizers used for Swab Sampling                 | 366        |
| Other Surface Testing Methods  | 367        |
| Airborne Viable Monitoring   | 368        |
| Qualifying Environmental Monitoring Methods for Anaerobes                              | 369        |
| Installation Qualification (IQ) of Air Samplers  | 370        |
| Operational Qualification (OQ) of Air Samplers   | 371        |
| Performance Qualification (PQ) of Air Samplers   | 371        |
| Airborne Particulate Monitoring  | 372        |
| Installation Qualification (IQ) for Particle Samplers                                  | 373        |
| Operation Qualification (OQ) of Air Samplers   | 373        |
| Performance Qualification (PQ) of Air Samplers   | 374        |
| Conclusion   | 375        |
| References   | 375        |

## CHAPTER 27: PERFORMANCE QUALIFICATION OF AN ENVIRONMENTAL MONITORING PROGRAM

|   |            |
|---|------------|
| <i>Jeanne Moldenhauer</i>                           | <b>377</b> |
| Abstract  | 377        |
| Pre-Qualification Activities                        | 377        |
| Typical Components of the Performance Qualification | 378        |
| Collection of Baseline Data                         | 378        |
| Static Versus Dynamic Testing                       | 379        |

|  |     |
|--|-----|
| Cleaning and Sanitization                    | 379 |
| Method Qualification                         | 380 |
| Selection of Media and Incubation Conditions | 380 |
| Trained and Qualified Personnel              | 380 |
| Collection of Environmental Data             | 381 |
| Support Data                                 | 381 |
| References                                   | 382 |

## **CHAPTER 28: MEDIA FILLS/PROCESS SIMULATIONS**

*Jeanne Moldenhauer*

**383**

|                          |     |
|--------------------------|-----|
| Introduction             | 383 |
| Environmental Monitoring | 384 |
| Interventions            | 384 |
| Conclusion               | 385 |
| Bibliography             | 385 |

## **CHAPTER 29: AIRFLOW VISUALIZATION AND DESIGN OF ASEPTIC PROCEDURES**

*Charles S. Levine*

**387**

|   |     |
|---|-----|
| Introduction  | 387 |
| What is Airflow Visualization?  | 388 |
| The Role of Airflow Visualization in Environmental Control            | 389 |
| Where are Airflow Visualization Studies Useful?                       | 391 |
| Selecting Aerosol Generation Equipment                                | 392 |
| Selecting Video Equipment and Recording Studies                       | 394 |
| Performance of an Airflow Visualization Study                         | 395 |
| Static Airflow Visualization  | 395 |
| Dynamic Airflow Visualization   | 397 |
| Level B Interventions   | 399 |
| Level A and A' Interventions  | 399 |
| Case Studies  | 402 |
| Filling and Transfer of Partially Stopper Vials for Lyophilization    | 402 |
| Expansion of the Class 100 (ISO Class 5) Area for Lyophilizer Loading | 405 |
| Bosch/TL Systems FLP Vial Filling System                              | 407 |
| Conclusions   | 412 |
| Acknowledgement   | 412 |
| References  | 412 |

## **INDEX**

**415**
