
CONTENTS

I	Pharmacopoeial Water Systems and the Risks of Microbiological Contamination from Water	I
	<i>Nigel Hall</i>	
	Water as a Habitat for Microorganisms	1
	Compendial Standards for Microbiological Quality of Water	4
	Microbiological Limits for Purified Water	6
	Microbiological Limits for Water for Injection, Water Injections and Highly Purified Water	9
	Pharmacopoeial Water Systems	11
	Pre-treatment	12
	Preparation Processes for Purified Water	14
	Preparation Processes for Water for Injection(s)	16
	Storage and Distribution	17
	Water System Design	23
	Microbiological Monitoring of Water Systems	26
	Investigating Excursions versus Microbiological Limits for Water	30
	Other Sources of Microbial Contamination from Water	31
	References	33

2	Isolation Technology	37
	<i>Tim Coles</i>	
	Introduction	37
	History and Development	37
	Typical Isolator Applications	39
	Pros and Cons	41
	Ergonomics	42
	Outline of the Technology	43
	Structures — Flexible and Rigid	43
	Air Flow, Pressure and Filtration	45
	Handling Methods	54
	Control, Instrumentation, Alarms and Data Recording	55
	Transfer Methods	57
	Doors, Mouseholes, Lockchambers, Rapid Gassing Ports and Product Passout Ports	57
	Rapid Transfer Ports	60
	Direct Interface Utilities	65
	Sporicidal Gassing	66
	Gas Generators — Introduction	66
	Gas Generators — Internal Generation, Open Loop and Closed Loop	67
	Vapour Phase Hydrogen Peroxide — The Wet or Dry Issue	69
	Validation of the Sporicidal Gassing Process	70
	Ozone and Chlorine Dioxide	75
	Monitoring	75
	Physical Monitoring and Leak Testing	75
	Microbiological Monitoring	82
	Validation for Isolators	83
	Introduction	83
	Isolator Validation Protocols	83
	On-Going Validation	87
	Restricted Access Barrier Systems (RABS)	88
	Introduction	88
	Definition	88
	Active and Passive RABS	92
	Conclusion	92
	Isolator Operation	92
	Siting	92
	Clothing	93
	Training and Operation	94

	Cleaning	94
	Maintenance	95
	References	97
3	Caveats of Bacterial Endotoxin Testing	99
	<i>Kevin Williams</i>	
	Using the In-Plate Spike Method	99
	Dosing/Specification Development/Safety Factors	101
	Starting a Lab	104
	Appreciating the Sensitivity of the Test/Avoiding a Skewed View of the Associated Error	106
	Container Closure Testing/Differentiating Depyrogenation Destruction and Removal	107
	Developing an Endotoxin Control Strategy	110
	Having Awareness of Various Bacterial Endotoxin Testing Risks	112
	Regulatory Risk	112
	Sampling Risk	114
	Activity Risk	117
	Endotoxin Aggregation Issues (ie 'Stickiness)/Proteases and Proteins as Assay Development Tools	118
	Know When a Method is Optimised (Using Polynomial Regression)	120
	Appreciating the Historical Direction of the Use of LAL	121
	Awareness of the Potential for Non-Endotoxin Pyrogens	123
	Gentamicin	124
	Baxter	125
	Appreciating the Relevance of Limulus (and Other Arthropods) in Medical Science	128
	References	130
4	The Role of the Quality Control Microbiology Laboratory in the Control of Contamination	135
	<i>Lucia Clontz</i>	
	Introduction	135
	Training of QC Personnel	136
	Training for Clean Room Work	137
	Training in Sample Collection, Preservation and Storage	139
	Training for Microbiology Analysts	139

Training for QC Laboratory Management	141
Best Practices in a QC Microbiology Laboratory	141
Laboratory Procedures	142
Quality Control Testing of Microbiological Media	142
Maintenance of Stock Cultures	144
Handling of Microbiological Media, Materials, and Equipment	145
Sample Handling and Tracking	145
Establishing and Managing Monitoring Programs for Clean Rooms and Clean Utilities	147
Choice of Microbiological Media and Incubation Conditions	147
Choice of Sample Sites and Testing Frequency	149
Choice of Equipment for Environmental Monitoring	151
Microbial Identification Program Strategy	151
Alert and Action Level Excursions	152
Automated Microbial ID Systems	152
Phenotypic vs. Genotypic Microbial Identification	153
Managing a Microbial ID Program	161
Microbiological Data Management	161
Evaluation of Historical Data	162
Microbial Deviations and Investigations	162
Summary Reports for Trended Data	163
Team Work and Customer Service	163
Conclusion	167
References	168
5 Risk Management: Practicalities and Problems in Pharmaceutical Manufacture	171
<i>Nigel Halls</i>	
Risk and What it Means	172
Risk	173
Risk Analysis	173
Risk Management	173
Risk Mitigation	175
Risk Analysis Tools	176
The Risk Analysis Team	176
Process Mapping	179
Hazard Analysis Critical Control Points (HACCP)	184
Failure Modes and Effects Analysis (FMEA)	188
