

Technical Report No. 78

Particulate Matter in Oral Dosage Forms

Authors and Contributors

Anil Sawant, PhD, Merck & Co/ Merck Sharpe & Dohm (*Chair*)

Girish Agashe, Merck & Co.

Joseph DeVito, PharmD, Teva Pharmaceuticals

Katrina Elia, SPI Pharma Inc.

David Exline, Gateway Analytical, LLC

Dennis E. Guilfoyle, PhD, Johnson & Johnson Inc.

Cindy Gulian, PhD, Johnson & Johnson Consumer Inc.

Sonia Khawaja, Johnson & Johnson Inc.

Wendy Luo, PhD, Bristol-Myers Squibb

Dirk Overroedder, PhD, Johnson & Johnson Inc.

Leslie Shur, Johnson & Johnson Consumer Inc.

Myriam Sosa, Novartis

Particulate Matter in Oral Dosage Forms

Technical Report No. 78

Table of Contents

1.0 INTRODUCTION.....	1	6.4 Sample Preparation.....	13
1.1 Purpose.....	1	6.5 Cleaning of Samples.....	15
1.2 Scope	1	6.6 Instrument Description and Basic Operating Parameters	15
2.0 GLOSSARY	2	6.7 Interpretation of Analytical Data and Source Determination.....	16
2.1 Acronyms	2	6.8 Quality Control	16
3.0 BACKGROUND AND BENCHMARKING	3	7.0 CLINICAL RELEVANCE	17
4.0 PRODUCT TYPES AND FORMULATIONS.....	6	7.1 Medical Considerations	17
4.1 Solid Oral Dosage Forms.....	6	7.1.1 Physical Injury	17
4.2 Liquid Oral Dosage Forms.....	6	7.1.2 Mechanical Obstruction of the Airway	18
5.0 SOURCES AND MITIGATION	7	7.2 Toxicology Assessment	18
6.0 SAMPLING, TESTING, AND PARTICLE IDENTIFICATION	10	7.3 Points to Consider in Assessing Health Risk	18
6.1 Trace Analysis Evaluation.....	10	8.0 RISK ASSESSMENT	19
6.2 Pharmaceutical Particulate Examination.....	11	9.0 CONCLUSION.....	21
6.3 Basic Analysis of Particulates.....	11	10.0 REFERENCES.....	22

FIGURES AND TABLES INDEX

Table 5.0-1	Oral Dosage Forms Particulate Matter Sources, Generation, and Mitigation.....	8	Figure 6.3-3	Flow Chart for Characterization and Source Determination of Foreign Particulate.....	14
Table 6.3-1	Analytical Techniques That Can Be Used to Determine Particulate Sizing and Characterization	11	Figure 8.0-1	Risks Evaluation Decision Tree for Particulates Found in Oral Dosage Form...	20
Figure 6.3-1	Optical micrograph of cotton fiber depicting ribbon-like morphology vs. a typical polyester fiber with round, cross-sectional shape.....	12	Figure 8.0-2	Risks Evaluation Matrix for Particulates Found in Oral Dosage Forms	21
Figure 6.3-2	Image of a comparison microscope and micrograph of two hairs being viewed through it	12			

1.0 Introduction

Particulate matter in oral dosage forms has been the subject of customer complaints, recalls, and regulatory actions; yet, no industry standard or guidance exists addressing mitigation, acceptance criteria, clinical relevance, inspection, sampling, testing, or acceptable complaint levels. This lack of a consensus standard, along with subjective decision-making, makes it difficult to compare quality metrics (e.g., rejection rate, complaint rate, recall rate, etc.) between products, manufacturing sites, or companies. To better understand industry's perspective on the root causes, challenges, and current practices, the Parenteral Drug Association launched the *PDA Survey: 2015 Particulate Matter in Oral Dosage Forms (1)*. Responses clearly indicated that the majority of the respondent facilities had been inspected by the U.S. Food and Drug Administration and that of these, a few had already received particulate observations from the FDA, European Medicines Agency, or local/national healthcare agencies. Although particulate matter recalls are predominantly associated with parenteral products, several oral products have also been recalled for the presence of foreign particles (2–6).

1.1 Purpose

This technical report documents the current practices used by manufacturers of drug products, active pharmaceutical ingredients, excipients, and packaging/primary containers to control, inspect, sample, and test intrinsic and extrinsic particulate matter in oral dosage forms.

1.2 Scope

The scope of this technical report includes current practices and guidelines for monitoring of particulates, as well as recent quality, clinical relevance, and regulatory experience.

This document is limited to discussion of visible particulate matter in oral dosage forms. Other dosage forms that are administered by a non-oral route and sterile dosage forms are out of scope.
